

Appln. No. 09/100,463  
Amendment  
Response to Office Action dated March 22, 2004

Docket No. 1610-82

### AMENDMENTS TO THE CLAIMS

This listing of claims is proposed to replace all prior versions, and listings, of claims in the application:

1. (Currently amended) A cosmetic powder comprising:  
a powder [[core]] comprising at least one of the group consisting of talc, mica, kaolin, nylon, pigment, and spherical and non-spherical silica; and  
a coating applied to the powder [[core]], wherein the coating comprises at least one alpha hydroxy acid polymer or copolymer belonging to the poly-alpha-hydroxy acids family whereby said alpha hydroxy acid polymer or copolymer can degrade and release onto the skin of a wearer at least one of monomers and oligomers on application of said cosmetic powder to the skin,  
wherein said alpha hydroxy acid polymer or copolymer is in a quantity between 0.1 to 20% by weight of the coated cosmetic powder; and  
said powder is in a quantity between 60 to 99% by weight of the coated cosmetic powder.

2-5. (Cancelled)

6. (Previously presented) The cosmetic powder according to claim 1, wherein said coating includes poly DL-lactide.

7. (Previously presented) The cosmetic powder according to claim 1, wherein said coating includes at least one of lipid, lipophilic and hydrophilic functional substances.

8. (Previously presented) The cosmetic powder according to claim 1, wherein said coating includes at least one of vitamins and amino acids.

Docket No. 1610-82

Amendment

Response to Office Action dated March 22, 2004

9. (Original) Cosmetic composition containing at least one cosmetic powder according to claim 1.

10. (Currently amended) A process for the preparation of a cosmetic powder comprising the steps of:

preparation of a powder phase, wherein said powder phase comprises at least one of the group consisting of talc, mica, kaolin, nylon, pigments, and spherical and non-spherical silica;

preparation of an alpha hydroxy acids polymer or co-polymer phase;

mixture of said powder phase and of said alpha hydroxy acids polymer or co-polymer phase with a solvent in slurry or spray; and

evaporation of the solvent, to form an alpha hydroxy acids polymer or co-polymer coating on said powder, whereby said coating can degrade and release onto the skin of a wearer at least one of monomers and oligomers on application of said cosmetic powder to the skin;

wherein the alpha hydroxy acid polymer or copolymer is in a quantity between 0.1 to 20% by weight of the coated cosmetic powder; and

said powder is in a quantity between 60 to 99% by weight of the coated cosmetic powder.

11. (Previously presented) The process according to claim 10, wherein said solvent is ethyl acetate.

12. (Previously presented) The process according to claim 10, further comprising the step of mixing said alpha hydroxy acids polymer or co-polymer phase with at least one of lipid, lipophilic and hydrophilic functional substances.

13. (Previously presented) The process according to claim 10, further comprising the step of mixing said alpha hydroxy acids polymer or co-polymer phase with at least one of vitamins and amino acids.

14-15. (Cancelled)

Docket No. 1610-82

Amendment

Response to Office Action dated March 22, 2004

16. (Previously presented) The cosmetic powder according to claim 7, comprising said coating in a quantity between 0.001 and 80% by weight.

17. (Previously presented) The cosmetic powder according to claim 16, comprising said coating in a quantity between about 1 and 30% by weight.
